

## Bulletin: Warehouse Shortcuts for In-class Quiz #5:

- Fatality investigation report by Alberta Occupational Health and Safety - Incident Notice 2018-03.
- The report summary: A driver loaded a truck with material. Upon completing the work, the driver drove the truck out of the loading bay to the designated parking area outside, and returned to the interior dock area to close the overhead doors.
- Red path: The driver pushed the button, rushed through the interior overhead door and jumped down, rushed through the loading bay area, and attempted to rush under the closing exterior overhead door; the door struck and pinned the driver. The driver suffered fatal injuries.
- Upon inspection, the overhead door mechanism was found to be functioning properly.
- Importance to you: you are the Warehouse Manager for another Major Distribution Company.
- Your concerns: You have observed your workers using “short-cuts” (i.e. going under moving overhead doors instead of using man-doors) at your warehouse complex.
